

# AGRICULTURE TECHNICAL MANUAL

**PROMETEON**

# THE SOLE COMPANY FULLY FOCUSED ON THE INDUSTRIAL BUSINESS WITH MORE THAN 100 YEARS OF EXPERIENCE.

Prometeon Tyre Group is the only tyre company solely focused on the Industrial sector, for the transport of goods and people, the Agro and OTR segments.

Prometeon has a multi-level offering with a product portfolio that includes the PIRELLI and FORMULA brands, under license, as well as the ANTEO, ERACLE and TEGRYS brands.

Prometeon's PIRELLI branded Agriculture range includes exclusively PIRELLI-branded, high performance products designed to improve field efficiency through sustainable innovation. This is the valuable heritage behind our offer.

Prometeon is focused on the continuous in-house development of innovative technological solutions, which are at the basis of the Prometeon mission to design increasingly performing and at the same time more sustainable products.

Prometeon crafts tyres with the objective to offer the right solution, taking into account the type of vehicle and surfaces, to offer the maximum benefit for the customer. Those parameters have a direct effect on all tyre selection variables, both technical (selection of materials, design, etc.) and financial (operative costs). The combination of application and vehicle type provides the most suitable tyre for each use.

## KEY FIGURES

(2021 data)

4 factories (2 in Brazil, 1 in Egypt, 1 in Turkey)

the heart of product innovation is represented by 3 Research and Development Centers (Italy, Brazil, Turkey) and 1 Development Centre in Egypt

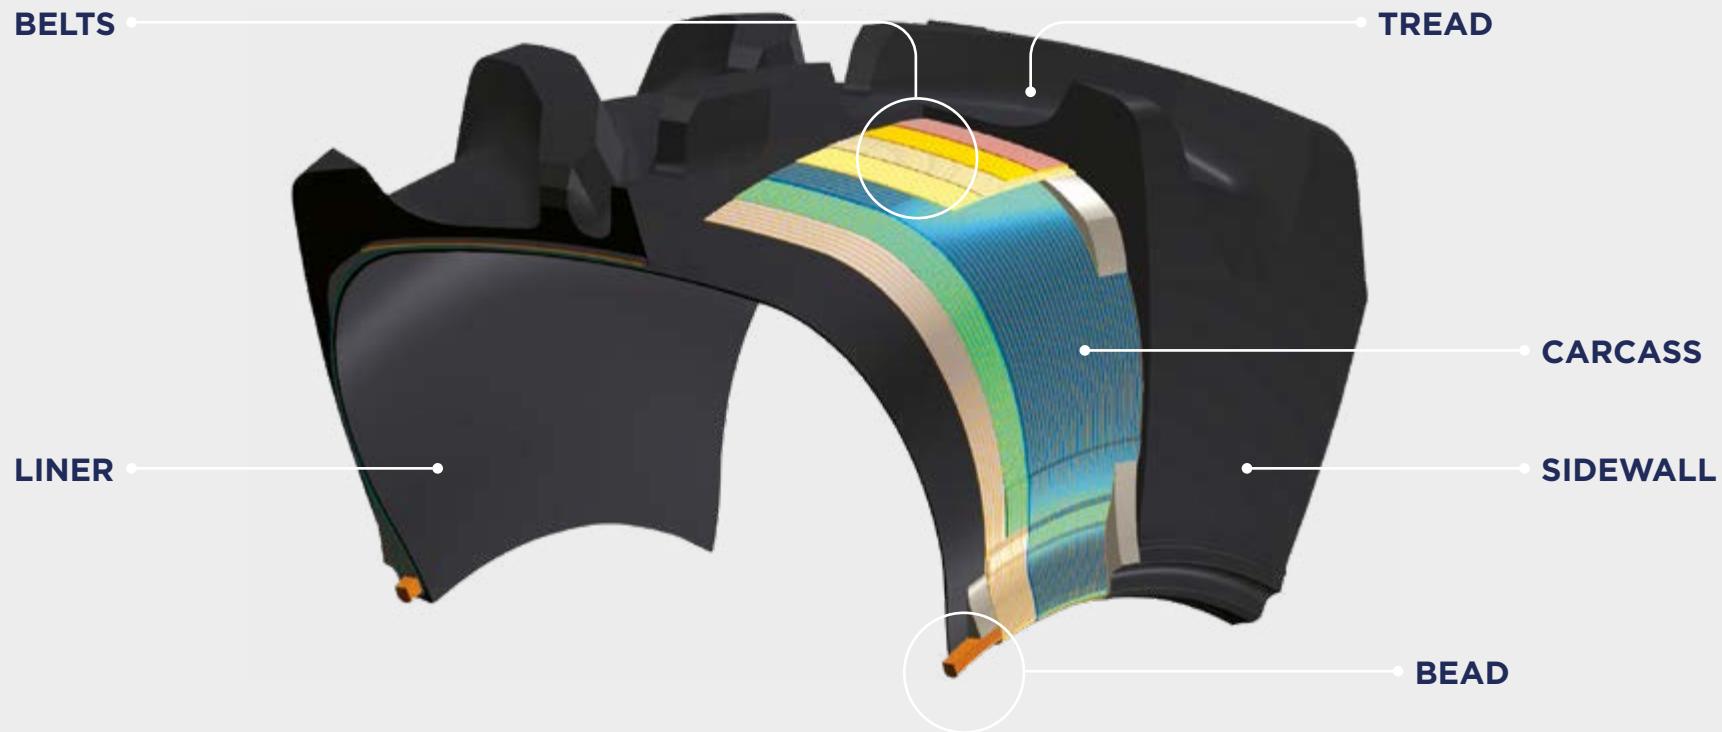

7,300 employees around the world

# THE TYRE COMPONENTS

## TREAD

The component of the tyre which is directly in contact with the ground, ensuring traction, wear and cut resistance, stability, drivability and self-cleaning.

## SIDEWALLS

The flexible component of the tyres, made of special rubbers. Their function are vibration damping and driver's comfort.

## BEAD

The stiffest component of the tyre, made up by steel wire, whose function is tyre coupling on the wheel, and air sealing. It is also the bead function to convey the wheel rotation to the tyre.

## LINER

In the tubeless tyre is a layer made of a special rubber with air non-permeability properties to prevent air leakage. In the tyres with inner tubes this layer has a special compound that protects them from mechanical friction with the inner tube.

## CARCASS

The structural component of the tyre. It holds its shape when it is inflated, providing resistance so the tyre can withstand the load and speed required for the application. Its function is also to provide stiffness and flexibility required for comfort and drivability. It can be diagonal (BIAS) ply or radial, depending on the tyre construction.

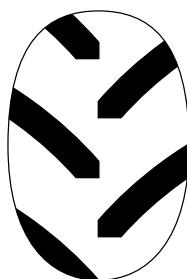

# THE TYRE COMPONENTS

## A. DIAGONAL (BIAS) PLY CONSTRUCTION

This tyre is built with overlapped and cross plies, where the inner cords are arranged diagonally in relation to the tyre radius direction axle.

**Diagonal (BIAS) Ply Footprint:**  
Lower area of contact with the ground.

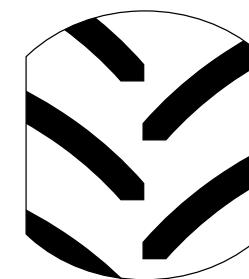

## B. RADIAL CONSTRUCTION

In this model, the cords are arranged following the direction of the tyre radius, with no crossings. The tread stability is acquired through crossed belts, made of cross belts arranged longitudinally. The belts cause an increase of the contact surface, more traction and dimensional stability.

**Radial Footprint:**  
Greater area of contact with the ground.

## ADVANTAGES OF RADIAL TYRES

- Greater traction
- Less soil compaction
- More durability
- Better drivability
- More comfort
- Less fuel consumption

# SIDEWALL MARKINGS

## MARKINGS

Every type of tyre has its own nomenclature, which identifies it. Such information, which is very relevant for the correct use of the product, is printed on the tyre sidewall. Some of which:

- ① Manufacturer's name
- ② Tubetype or tubeless
- ③ Maximum load index per tyre for single wheel use
- ④ Speed Symbol
- ⑤ Nominal width of the section (in inches or millimeters)
- ⑥ Tyre series (percentage quotient height/width)
- ⑦ Construction Code
- ⑧ Rim diameter (in inches)
- ⑨ Max bead seating pressure
- ⑩ Rotation direction
- ⑪ Tyre model

# SIDEWALL MARKINGS

## TYRE SIZES

The tyre size designation is, generally, including nominal section width and tyre inner diameter, and may include nominal aspect ratio (series) between the two measures. The tyres are usually measured in millimeters or inches.

### Example: 710/75R42

**710** = Nominal section width (in mm)

**75** = Percentage ratio between the section height and the nominal section width

**R** = Radial construction

**42** = Rim diameter (in inches)

## LOAD CAPACITY

Represents the maximum load the tyre can withstand in its nominal utilization condition, identified by a load index (numeric), or other symbols representing the tyre load capacity in Kg.

D	65
E	70

## TECHNICAL TABLE LEGEND

### Section Width (mm)

The linear distance between the outsides of the sidewalls of an inflated tyre excluding elevations due to labelling (marking), protective bands or ribs.

### Outer diameter (mm)

The diameter of an inflated tyre at the outermost surface of the tread

### Static loaded radius (mm)

The distance between wheel centre and road surface referring to a tyre inflated and loaded at reference values under static conditions

### Rolling circumference (mm)

The distance covered in one complete revolution of the tyre at reference load and pressure

# THE PHP™ AND PHE SERIES: HIGH PERFORMANCE ON AND OFF THE FIELD.

Prometeon's Agricultural tyres are designed keeping farmers and soil preservation at the center of our product development.

Prometeon's Premium PIRELLI branded tyres provide less soil compaction, for a sustainable efficiency both on the field and on the road.

The PHP™ and the new PHE Series stand out for their excellent traction, outstanding balance between operational efficiency in the field, high mileage on the road and low fuel consumption. They feature an excellent lifespan and even wear of the lug surfaces for a maximum yield.

Both PHP™ and PHE product specifications for Europe have been designed to offer the best performances in the fields while delivering an optimal road behavior in terms of comfort and tread wear.

The result is maximum driving safety and vehicle stability, even in the harshest conditions.

## GREEN PERFORMANCE "ECO IMPACT"

**ENERGY™ EFFICIENT:** radial tyres contribute to reducing the consumption of fuel and CO2 emissions.

**CLEAN AIR:** produced using materials that reduce environmental impact.

**HIGH DURABILITY:** the rubber compound developed for Europe has an outstanding performance in terms of lifetime.

# PRODUCT RANGE

## POWER AND TECHNOLOGY WALK TOGETHER.

Radial product developed to provide an excellent traction, durability, self cleaning and low compaction, respecting the environment.

### Fuel saving

In difficult conditions, the highest level of traction is provided by the design optimization of the lug shape, the innovative shoulder (PIRELLI Patent) and the inter-lug area. Self cleaning is outstanding. Good traction together with a lower rolling resistance allow significant fuel saving.

### Longlasting

Specific tread design and lug geometry, together with a new generation of compounds, give PHP™ excellent performance in terms of long life and regular wear, giving a significant contribution to reduce operating costs.

### Less soil compaction

The real dimension of the footprint ensures less pressure on the ground and the flexibility of the casing provides good damping of the vertical forces, helping to ensure a maximum yield.

### Safety and comfort for the driver

The sidewall profile and structure have been studied for balancing vertical and lateral stiffness. The PHP™ tread pattern has been designed using the most advanced CAD systems in order to deeply analyze footprint shape, contact pressure map and stress/strain analysis on the lugs. The driver enjoys the best handling and comfort.

### Torque transmission

As PHP™ is made to fit the heaviest tractors, the bead area geometry is designed for a perfect torque transmission avoiding rim slippage. It also allows an easy fitting on the rim.

# PRODUCT RANGE

## BEST EFFICIENCY IN THE FIELD AND ON THE ROAD.

Radial IF (**Increased Flection**) tyre designed to provide an excellent traction and low compaction to High Power Tractors (>=300HP), reducing operational costs and environment impacts, maximizing comfort.

### Optimal traction

The thicker lug geometry and robust tread design allow an optimal self-cleaning and traction, for an increased productivity and reduced operational costs.

### Extra Mileage

The new tread compound provides low tread wear, perfect for long operations even in the harshest conditions.

### Sidewall Resistance

The new sidewall profile with specific rubber layers enhances fatigue resistance and promotes resistance in high flexion applications allowing handling and comfort to reach the highest levels.

### Enhanced handling and comfort

Outstanding balance between operational efficiency in the field and on the road: the new carcass structure provides maximized comfort and safety for the driver.

(1) DW-B rims replace DW-A rims and can be used with fully interchangeability

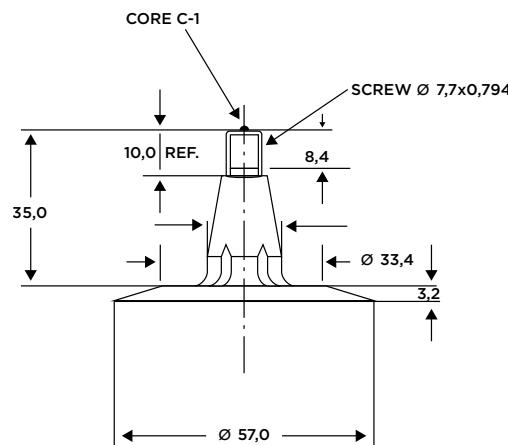

# RIMS AND VALVES

## Valves

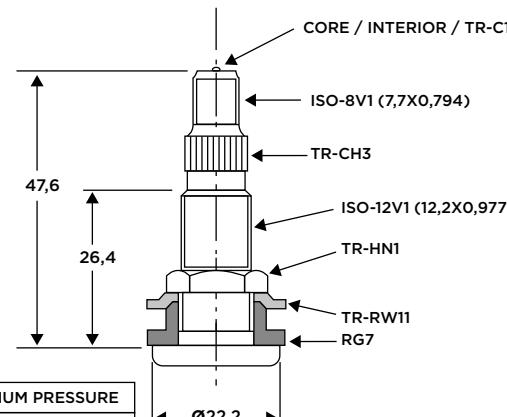

**TR 218A**

**TR 15**

### VALVES FOR TUBELESS TYRE FOR AGRICULTURAL USE

Note: recommended torque for valve assembly: 52-63 kg.cm

VALVE	Ø RIM HOLE	MAXIMUM PRESSURE
TR-618A	15,9	1035 kPa (150 lbf/pol <sup>2</sup> )

# TABLES OF EQUIVALENCE AND CONVERSION

## Equivalence Table (Sizes in mm and inches)

### ETRTO Equivalence of Speed Radius Index (SRI)

#### Table of interchangeability

The Speed Radius Index by convention a parameter used exclusively for the calculation of the theoretical speed of tractors during European Union homologation procedures and for interchangeability of different tyre sizes. In no case can the Speed Radius Index be used as, or converted into an actual measurable value of rolling circumference.

RADIUS INDEX	RIM D	CODE	95 SERIES	90 SERIES	85 SERIES	80 SERIES	75 SERIES	70 SERIES	65 SERIES	60 SERIES
